

Position: Mechanic/Crane Technician

Date: 02/03/2012

Location: Wind

Posting #: 12-194

Job Description:

- Responsible for performing PM and corrective maintenance on diesel engines, booms, electrical systems (including troubleshooting onboard computer systems), hydraulic systems (booms, outriggers, pumps), brakes and other basic components
- Must have the ability to work on hydraulic and conventional cranes, forklifts, tractor trailers and miscellaneous equipment
- Must work well and communicate effectively with operators and other mechanics
- Full-time position, hourly & excellent benefits
- Travel position with potentially long hours while on assignment. Employee must be able to work six weeks on assignment, off one week and return.

Qualifications:

- Minimum of 5 years experience in crane maintenance with proven troubleshooting skills
- Experience in crane operations (NCCCO is highly desirable)
- Must work safely in a fast paced environment – many times under pressure
- Experience with Grove, Demag, Link Belt and Liebherr cranes
- Experience in diesel, gasoline and propane engines
- Proven ability to read electrical and hydraulic schematics
- Must have appropriate ASE certifications
- Must have current CDL
- Experience troubleshooting PAT and similar on crane control system
- Willing to travel for days to weeks at a time, sometimes with limited notice
- Creative thinking skills to make continuous improvements
- Willing to work day and night shifts, weekends and holidays
- Basic rigging knowledge and experience in the heavy construction business
- Experience troubleshooting and repairing electrical boards and crane computer systems
- Pass drug test, fit for duty and clean background check
